Birds seen around Katmandu & Gokarna - not seen otherwise
on trek or in chitwan.

Little swift

Collared scops owl.

Tailor bird

Rufous woodpecker

White breasted pied

Dark cuckoo shrike

Large cuckoo shrike

Scarlet minivet

Pied bushchat

Chestnut bellied nuthatch

Long billed vulture

Hobby

Red woodshrike

Blue throated flycatcher

Thick billed warbler

Plain flowerpecker

Dusky crag martin.

BIRDS - NEPAL 1988

Nest / nestings / fledglings found.

- Oriental white eye - chicks (4) feathered Kathmandu
Barn swallow - chicks, feathered Kathmandu
Indian House crow - Nesting being built Kathmandu
Cattle egret - Kathmandu
Night heron - Kathmandu
Monia - chicks already flown Chitwan
Little bronze drong - journey up to stobru
Tickets warbler - Nest being built Kanjin
Blue whistling thrush - 3 nests on Trisuli river
Fire tailed sunbird - approach to Gosairkund (4 eggs - ^{white with rusty} flecks)
Indian pipit - nest being built - Chitwan
Ashy wood swallows - chicks being fed by adults - Chitwan
Indian Roller - chitwan - feeding fledged young
Rufous necked scimitar babbler - 3 fledged young - Shabru
Golden eagle nest - chicks - longfang approaching Kanjin.
Tailor bird nest - eggs - British embassy Kathmandu
Blue throated barbet - building nest hole - B.E. Kathmandu.
Indian honey buzzard - Kathmandu
Dipper with young, on approach to Bamboo ledge L.T.
Black faced laughing thrush with 4 fledglings,
white browed tit babbler nestings approach to Kathmandu valley from Gos
Red vented titbird - eggs - B.E. Kathmandu
Yellow cheeked tit - return journey from Gosairkund (3 fledglings)
Hairy woodpecker - nest building - "
Coppersmith barbet - 3 fledglings - Kathmandu
Young tickell's thrush (1 only) - 'native girl's pet'
Common myna - Kathmandu
Olive backed pipit - longfang valley near Kanjin.

mt. 722.

Species

Information.

Masky Eagle owl — Seen at dusk on the far side (from the lodge) of Spida lodge. Seen in flight — It is believed that a pair are nesting (by the resident naturalists - Nepali)

♂ Spot winged godwit — Trek Day 5 & 11

5 — Between the crossing of Trisuli Khola and Syabru
11 — Pine woodlands below Langtang village

Little bronze drongo — Seen sitting on nest about 2 hours walk from Duche. The nest was about 25 ft up in the fork of a lateral branch of some deciduous tree. Considerable movement of the nest occurred as the winds picked up. The nest was a deep cup shape, only the culcits head & long tail plumes could be seen from below. The nest was a neat tightly woven mixture of dead leaves, small twigs and grasses.

Fire tailed sunbird — May 14th & 16th.

Nests (2) — First about a half days walk from Gosickund blues. The second at Gopti Cave.

Both nests in juniper bushes — both about 5 ft high. The nest was domed like a long tailed tit, but not as neat. Nest material was largely mosses, grasses and leaves (a few small twigs). Eggs (5 in one nest) ~~rustlet~~ russet 'blackhead' in colour.

A number of males seen displaying — flight shows what I would call 'preening' in the birding sense — males undulating flight with chest pushed forward. Much singing — on specific perching points.

Hoary parwing — May 18th

Close to Kutumsang. A pair seen building nest about 20 ft up in tree fork (thickly covered with epiphytes). The adult pair were taking grasses, small twigs but largely leaves to the site. Pair very timid and I did not stay too long to avoid disturbance. (Dark woodland)

Black faced laughing thrush & May 17th
white browed tit babbler

Half day walk from Kutumsang. Both species seen tending fledglings (5 w b tit babbler, 3 black faced l. thrushes)
Terrain — mixed rhododendron, juniper & pine.
