Preface

New Approaches to Constitution Drafting

Nepal is at a critical juncture and is poised to debate about and draft a new constitution through a constituent assembly and to strengthen the nation's commitment to the rule of law. While debating and constitution making amount to political action, drafting a constitution and its supporting laws are more technical processes, which are no less important. So care must be taken while drafting a new constitution.

Constitutions are legal texts and must be written in a style that is objective, clear and precise. To reflect the intentions of the law makers, drafters of constitutions and other laws must understand the full meaning of legal terms and the implications that the words used will

have and then use the clearest words and formulations consistently. As legal texts are reference documents and normative guides, the words and formulations used in legal texts must be chosen with care, knowing that they will be subject to review and interpretation over time. Today the drafting of a constitution and supporting laws calls for a special style of writing that can be understood by ordinary people and not only by select groups of judges and lawyers.

Many legal terms, initially developed through Latin-based languages, literally get lost or mangled in translations, or are defined by varied users in differing contexts, creating ambiguity and confusion. International IDEA seeks to support the constitutional process in Nepal through the development of this glossary of constitutional and legal terms. The purposes of this glossary are threefold: to establish Nepali equivalents of English constitutional terms, to standardize Nepali terminologies and to contribute to the development of plain language drafting of legal and constitutional texts at this critical juncture.

This glossary is the product of the wonderful teamwork undertaken by Nepali translators and constitutional experts. A number of constitution-related words have emerged during the last couple of years in the Nepali political discourse. The team debated and deliberated on these words, their proper application and recorded them in this glossary with a view to standardizing them and ensuring consistency of practice and understanding. Besides the glossary, another important consequence of this exercise in translation was the creation of a network of translators working on the same topics and themes.

The *Glossary of Constitutional Terms* is a part of International IDEA's project, 'Supporting Constitution Building in Nepal', which is funded by the Royal Embassy of Norway and the British government.

We hope this *Glossary* will be useful to Nepali drafters, lawyers, translators and those interested in the constitution and in its writing.

Introduction

The Peculiarities of English Constitutional Language

Translators wrestling with the mysteries of English constitutional language are unlikely to find their task much lightened by explanations on why some of the peculiarities exist, but explanations like the following might at least help them better understand the rationale for the use of such language.

The Force of Tradition

There are a number of traditional approaches to drafting any legal documents, especially laws, which continue to affect the form of laws. Some of the most pervasive influences are the avoidance of punctuation, the use of long sentences, the use of sexist language, the use of conservative and cautious language, the use of precise language, the use of archaic language and the use of Latinate terms.

Avoidance of Punctuation

Drafters of legal texts often avoid relying on punctuation to get their message across, and this practice sometimes extends to avoiding virtually all punctuation except the full stop. One reason for this was that earlier, there were no specific rules of grammar, spelling and punctuation. The other reason was that printers were unreliable, as was their equipment in some cases. Even today, there are reasons for not relying too heavily on punctuation to convey meaning. First, even with rules about punctuation, modern standards of punctuation are not good and are, perhaps, getting worse, thanks to a general lack of rigour in thinking. Second, if someone has to get their meaning across without relying on punctuation they will have to think, and think clearly, about what they want to say.

We find this propensity for drafting without the aid of punctuation among legal experts even today. For example, the *Arizona Legislative Bill Drafting Manual*, 2006 version¹, says, 'A properly drafted bill requires little punctuation.' Nowadays, legal writers prefer, instead, the use of short sentences—not the long sentences without punctuation, so often found in the past.

The Use of Long Sentences

Another custom is to have only one sentence in a section, clause or subsection. The custom of using long sentences was prevalent in countries that opted for 'common law' (the system which originated in England and came to Nepal partly through India) but not in countries like France, which follow the 'civil law' tradition. Today, however, even in countries that follow the legislative tradition of the Common Law, this custom is breaking down.

Although enormously long sentences are hard to understand, even if properly punctuated, it is not always possible to use very short sentences. In order to aid comprehension, constitutions have started using sections or articles with many levels of subdivision. Here is an example (from the Constitution of Papua New Guinea):

2. If—

- a. there is a vacancy in the office of Governor-General; or
- b. the Governor-General is suspended from office; or
- c. the Governor-General is—
 - i. on leave of absence; or
 - ii. absent from the country; or
 - iii. out of speedy and effective communication; or
 - iv. otherwise unable to perform, or is not readily available to perform, the duties of his office,

the Speaker is, subject to Subsection (3), the Acting Governor-General.

This is the work of a great drafter, Jo Lynch. Although the sentence is long, and may put off the ordinary reader, the text is very clear. These days, drafters might even go so far as to invert the entire article so that the point of the thing is clear at the beginning of the article:

- (1) In the circumstances listed in clause (2) the Speaker acts as Governor-General
- (2) The circumstances referred to in clause (1) are...

The Use of Sexist Language

Another aspect of legal writing, influenced by the drafting tradition, might lead readers to wonder whether the law has anything to say about women. In most legal documents, one finds only 'man', 'he', 'him' and 'his.' The reason for this preponderance of male-centric words is probably that (apart from the fact that all laws were made by men) women had effectively no legal rights when early laws were drafted, and they had fewer opportunities to benefit from, or to infringe on, the law. Early laws dealt with protecting the king's forests and game against poachers (probably men), with property (owned by men) and so on. Sexism in the English language is a much noticed phenomenon—even today, it is common to hear people assume that a lawyer or a doctor will be a man, and one routinely hears people say 'boys' when referring to a class of law students, even if quite a lot of them are women!—so maybe legal language is also one more manifestation of that inherent sexism in the language. To remedy the situation in legal texts, drafters eventually used the statutes themselves to clarify that 'man' includes 'woman' (giving rise to what would probably now be considered a politically incorrect joke told to all incoming law students: 'man' embraces 'woman').

Conservative and Cautious Language

Lawyers are rarely among the more radical members of society, and drafters are probably among the more conservative of lawyers (there are always exceptions, of course). So lawyers tend to err on the side of caution—caution in terms of innovation and caution in terms of trying to make sure that nothing is left out. We even have

a phrase in Latin about being overcautious: 'ex abundanti cautela' or 'out of an abundance of caution'—used when a court feels the need to say that a word or phrase adds nothing (which goes against a basic principle of statutory interpretation that meaning must be given to each word or phrase).

But one should not assume too easily that the seeming verbosity in legal texts is the result of drafters being too cautious. Look at this (also from the Constitution of Papua New Guinea): 'the privileges, powers, functions, duties and responsibilities of the Head of State may be had, exercised and performed through a Governor-General.' If one analyzes the import carried by the apparently synonymous words used here—privilege, power, function, duty and responsibility—one will realize that these words have different shades of meaning; Lynch was acting out of caution, not out of an excess of caution.

Archaism

Legal language can also seem odd to many readers because drafters reuse old words. Archaic words live on in statutes. There are all sorts of old-fashioned turns of phrase that survive in law, and in laws, that one will not find anywhere else:

the said Council;
pursuant to an order;
gross misconduct;
as soon as may be;
effluxion of time, etc.

Another is the word 'deemed': for example, 'a person shall not be deemed to hold an office of profit in the service of the republic by reason only that he is a president' means that something is treated for legal purposes as having a certain quality, even though this may not in fact be the case; in this example it means that although the president holds an office, and receives an income, he or she is not to be treated as holding 'an office of profit' (which would have certain constitutional consequences). A fictitious judge in the book written in the 1930s said, 'There is too much of this damned deeming.' Unfortunately, this ridicule has had little effect.

Precision

Precision in drafting, which, as Yash Ghai has said, requires consistency in translation, is extremely crucial. Among those words that are very important are 'shall' and 'may.' 'Shall' is the correct first person singular or plural of the verb 'to be', which implies simple prediction ('Tomorrow I/we shall go to the market'). The second or third person equivalent is 'will' (He will go to the market). Laws speak only in the third person; if they say 'He shall...' it is an instruction. 'The government shall' means 'The government must' or a little less abruptly 'the government has an obligation to.' 'May' implies a choice or discretion. Unfortunately, because of the imprecise use of words by some legal drafters, courts have been compelled to decide in some cases that 'shall' means 'may' or 'may' means 'shall' !

Sometimes lawyers or non-lawyers become over-enthusiastic about legal language. For example, in Johannesburg Airport (I think) there is a sign that says if passengers break some rule 'they shall be

prosecuted!' That suggests that the perpetrators have a duty to be prosecuted. That sign should actually say, 'They will be prosecuted'. The importance of words like 'shall' can also be illustrated by this story about the Kenyan Constitution. The Kenyan Constituent Assembly members, charged with drafting a new Constitution, had the difference between 'shall' and 'may' drilled into them by legal advisers but rejected 'must' as not being legal enough. Having accepted that 'may' implies that someone has a choice, they would not accept 'no person may' (which means that no one has any option to; in other words, they must not) and insisted on 'no person shall.'

What is a translator working on the new Nepali Constitution to do about 'shall'? It is not for the translator to make decisions about the legal meaning of something. There being no distinction in Nepali similar to that between 'the government will' and 'the government shall' in English, it would be best to use whatever has become customary in Nepali legal language to reflect 'shall' when that is found in English. 'May' should be translated by a word that indicates a choice or discretion.

Other examples of slightly—but perhaps importantly—different phrases are:

In consultation with;
After consultation with;
On the recommendation of;
With, and in accordance with, the advice, as in 'The head of state shall act only with, and in accordance with, the advice of the National Executive Council' (from the Papua New Guinea Constitution again).

Drafters usually stick with the older phrases and words like those above because if a word in a statute has been interpreted by a court, drafters and lawyers will assume that the word will be given the same meaning by a later court, at least when dealing with a statute on a similar topic. This practice of using old language tends to perpetuate somewhat out of date English.

Latinism

English law is not much based on Roman law, but because of English history rather a lot of Latin phrases (and occasionally mediaeval French phrases) appear in law, though less often in statutes. Among these are:

ad hoc (which means literally 'to that' and refers to a body or a rule for a particular occasion, like an *ad hoc* committee set up for a particular matter);

habeas corpus (which means 'may you have the body' and refers to a specific legal procedure to investigate a suggestion that a person is detained against the law);

nolle prosequi (which means 'do not prosecute' and is a special process in some countries under which prosecutions for criminal cases are stopped);

quo warranto (which means 'by what warrant or permission' and refers to a specific legal procedure in the Supreme Court brought into Nepal from India, a procedure abolished in the mid-twentieth century in England).

Fortunately for translators, no new Latin phrases of this sort are very likely to come into Nepali law, as no new Latin phrases are being coined in English law and the use of Latin is being reduced. So, if need be, they can refer to well-established existing translations.

However, translators should be aware that there are certain phrases routinely used in English legal language with a technical depth of meaning that is not overtly obvious, and they should thus translate accordingly:

For example, 'The Supreme Court shall be a court of record' should not be translated literally (it's meaningless anyway). Nor should it be translated as 'the Supreme Court should keep records.' This is a technical phrase and care should be taken to find the most appropriate translation.

'If a senator becomes subject to any of the disabilities mentioned in the last preceding section' does not mean if the senator breaks a leg! The disabilities are legal disabilities (probably like being bankrupt or convicted of a criminal offence).

Light at the End of the Tunnel?

Modern trends are, encouragingly, towards greater simplicity. There is a movement for clear and straightforward use of English in legal and public contexts. (See, for example, the website of Clarity and 'Fight the Fog' campaign—<http://www.clarity-international.net/>—and that of the European Union Translators 'Fight the Fog' campaign—http://ec.europa.eu/translation/writing/clear_writing/fight_the_fog_en.pdf.)

Various courses in simple legal language are being offered and drafting traditions are beginning to change. 'Must' (not 'shall') is being used. Drafters avoid saying 'he' or even 'he or she' and use a plural pronoun 'they' instead. Sentences are becoming shorter. See, for example, the Constitution of South Africa:

1. The Republic of South Africa is one, sovereign, democratic state founded on the following values:

Human dignity, the achievement of equality and the advancement of human rights and freedoms.

Non-racialism and non-sexism.

Supremacy of the Constitution and the rule of law.

Universal adult suffrage, a national common voters' roll, regular elections and a multiparty system of democratic government, to ensure accountability, responsiveness and openness.

- 3...(3) National legislation must provide for the acquisition, loss and restoration of citizenship.

It even says 'women and men' when talking of office holders, rather than 'persons' or 'citizens'; it certainly never uses 'he' to include 'she'!

Of course, these developments are of little help to the translator, who must either use the words/phrases traditionally used to translate particular usages or must choose words whose meanings are as close as possible to that of the original. Translators should not

be tempted to use 'differently-abled' if the original says 'disabled' or 'he and she' if the original says 'he,' or even 'women and men' if the original says 'men and women.' And care must be taken to translate the same word or phrase in the same way every time; especially if it is already used in the same document. It may be poor literary style to repeat oneself, but in law it is a virtue to use the same word if one means the same thing (and a different word if one means something different!).

In conclusion, this article does not claim to have even begun to find all the words that one needs to translate from English to Nepali (or vice versa). Explanations for other phrases in English can be found on the net at sites like the Lawyers.com website <http://research.lawyers.com/glossary/>. The findings should be used with care, though. This is an American site, and the same word may have different meanings in English and American law.

Constitutional Terms

*Signifies that the word or phrase occurs in the official translation of the Nepali Constitution, 1990; n. = noun; conj. = conjunction; adj. = adjective; adv. = adverb; vi. = intransitive verb; vt. = transitive verb; L = Latin; C = Constitution.

An underlined word or phrase indicates a synonym or something close to a synonym.

Prepositions in square brackets must accompany the English word.

A word or phrase in round brackets in column 2 is an explanation or further explanation.

A word or phrase in quotation marks indicates a concrete illustration of usage.

English	Example/explanation	नेपाली
1. abolish vt.	<u>Do away with</u> (usually in a legal sense, one would abolish an institution, not a building or a law)	उन्मूलन

2. abrogate vt.	<u>Bring to an end</u> (usually a law)	खारेज गर्नु (वा रद्द गर्नु, प्रायः कानुनी अर्थमा)

Appendix: Names of Parts of Legislation in English

- An ordinary statute in many systems (UK, India, etc.) is divided into sections, which can be divided into sub-sections, sub-sub-sections and paragraphs. Even the shortest statute must have at least one section.
- Sections may be grouped into parts.
- Constitutions in some countries is treated the same way as an ordinary statute; in other countries the main elements are termed 'articles' not sections; an article is divided into clauses, sub-clauses and paragraphs. A constitution may sometimes be divided into chapters (an expression not used for statutes in the UK because each statute is a chapter).
- A statute or a constitution may have appendices usually called schedules; these are divided into paragraphs, sub-paragraphs.
- Preamble—used in treaties and constitutions but rarely now in statutes (but still used in Nepal).
- Terminology is not uniform.

The purposes of this *Glossary of Constitutional Terms* are to establish Nepali equivalents of English constitutional terms, to standardize Nepali terminologies relevant to constitutions and to contribute to the development of plain language drafting.
